

Go Beneath the Surface

Use Throughout Your Facility to Clean and Eliminate Grease and Odors

While originally thought to only be effective at digesting organic FOGs (fats, oils, and greases), recently enzymes such as lipase and protease have been found to be effective at breaking down petroleum soils and have been used effectively in major oil spills. Use this same technology to keep your industrial facility clean and odor free.

Industrial Probiotic Solutions

Concrete Floors

Grease Solv industrial degreaser contains a special probiotic package to digest petroleum-based and other industrial soils residing in the porous concrete.

Production Area

Industrial oils and lubricants are common soils in areas with equipment and machinery. Use Grease Solv as a safer alternative degreaser to remove these soils.

Loading Dock Area

Grease Solv removes oil residue from trucks unloading and forklift tire marks. It won't cause runoff issues from traditional degreasers and is beneficial downstream as it continues to digest soils.

Trash Area

Malodors are the biggest problem in trash areas. Use Dumpster Treatment to completely eliminate malodors and continue working long after initial application.

Restrooms

For office and manufacturing area restrooms, use Push with probiotics. Push contains bacteria that produce uricase, an enzyme that breaks down uric acid.

Dumpsters

Dumpster Treatment with probiotics provides long-term odor control for foul-smelling commercial dumpsters, which can invite pests, become a public nuisance, and generally lead to poor facility impressions and experiences.
