

Restroom Probiotic Solutions

Go Beneath the Surface

Use Throughout the Restroom to Clean and Eliminate Malodors

Restrooms are the number one source for malodors in a facility. Improperly cleaned restrooms will not only appear dirty, but odors will also persist. Conventional cleaning products will improve the appearance and remove the odors temporarily. EnviroZyme® Probiotic Solutions will continue cleaning long after initial application, removing the soils below the surface and eliminating malodors between cleanings. Restroom probiotics contain Bacillus bacteria, which produce the enzyme uricase. Uricase breaks down uric acid – the #1 source of malodors in restrooms.

Restroom Probiotic Solutions

Urinals

Uric acid and hard water buildup are problematic. Use Probiotic Urinal Pucks to remove scale and malodors – keeping urinals clean and smelling fresh. Long lasting pucks do not degrade easily and slowly release for up to 2400 uses.

Toilets and Toilet Areas

Fight uric acid, hard water and rust. Push® with a diverse blend of probiotics removes all these soils and is available in three great scents to keep restrooms smelling fresh long after initial application.

Trash Receptacles

A hidden cause of restroom malodors, it is not enough to just empty the trash. Spraying the inside of the trash receptacle with Push® will eliminate odors and prevent them from returning.

Floor Tile and Grout

This is the main area for dirt and other soils to hide. Treatment with No-Rinse Floor Cleaner will remove the soils hiding beneath the surface and prevent slips and falls.

Walls Around Urinals

Uric acid buildup is extremely common in these areas. Push with probiotics produces uricase to break down the uric acid while eliminating malodors.

Soap and Towel Dispensers

One of the most frequently touched surfaces in the restroom, natural oils from the skin and soap residue can all be broken down with Push.

Drains

After cleaning the floors with Push, simply push the excess down the drain. This will keep the drains clear and breakdown organic soils downstream.
